DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The use of parenthesis in claim 1 renders the claims indefinite.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Clarke, III in view of Carnaudmetal (WO9637414), and further in view of either Schmalbach (EP432659) or the admitted prior art. Clarke, III teaches a container having a center panel that can be made with various sizes (col. 2, line 24), and an area of less than .5 square inches. Clarke, III meets all claimed limitations except for the diameter of the center panel being less than 1.835 and the ratio aspect between between 1.3 and 1.7. Carnaudmetal teaches that it is known in the art to provide various diameter for a center panel (Table 6). It would have been obvious to one of

Art Unit: 3727

ordinary skill in the art to provide the diameter of the center panel being less than 1.835 in Clarke, III as taught by Carnaudmetal to provide the desired end wall for the container.

With respect to the opening ratio, Schmalbach teaches that it is known in the art to provide an opening about 1.5 (31mm/20mm about the opening in Fig. 1). It would have been obvious to one of ordinary skill in the art to provide the opening with a ratio about 1.5 in Clarke, III as taught by Schmalbach to provide the desired opening for the container.

Furthermore, the specification discloses an opening with a ratio about 1.47 (page 8, line 13). It would have been obvious to one of ordinary skill in the art to provide an opening with a ratio about 1.5 in Clarke, III as taught by the admitted prior art to provide the desired opening for the container.

With respect to the discharge time as shown in Fig. 3, it is noted that the relationship between the discharge rate and area is well known in the art by the equation $Q=VA$ [Q =flow rate, V = volume, A : area]. Hence, there is a direct relationship between discharged rate (Q) and the Area. Thus, to adjust the area to control the flow rate are within the skills of one of ordinary skill in the art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tri M. Mai whose telephone number is (703)308-1038. The examiner can normally be reached on 7:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lee W Young can be reached on (703)308-2572. The fax phone numbers for the
